

## CE-F-SE - Suction unit w. sound cabinet

Vacuum units - Stationary

CE is a high quality plug and play suction unit, with good filter technology, included in series with stationary units for high vacuum. The unit consists of a complete compressed air cleaned cartridge filter, dust container, side channel blower and an electrical/control cabinet. CE-F-SE is standard painted in blue RAL5009 (available in other colors) and is equipped with a sound-absorbing hood, with approximately 15 dBA reduced noise level compared to standard CE. All CE units are assembled upon delivery and ready to connect the power, compressed air and a pipe system. Comes with a plastic bag in the dust container. Effective automatic filter cleaning by air pulse ensures good suction capacity even at high dust loads. The control cabinet, with starting device, has built-in functions for: start/stop, filter cleaning and terminal strip connection for external start. Cyclone and chassis are made of powder coated steel. The filter body can be detached from the stand and placed elsewhere. It is also possible to change the bumper container to a bottom valve or rotor valve for larger amounts of material.

The unit is preferably used for: Industrial vacuum cleaning, welding guns/hand tools, grinding dust from building/industrial environment

Dust separation takes place in two steps: Coarse separation in cyclone and fine separation in pleated conical cartridge filter

CE-F-SE - Central vacuum cleaner in different colors

CE-25F-SE, filter 25kW with sound cabinette
